

Nuclear safety policy

Safety of production and operation, safety of persons and work places

All procedures related to safety are implemented in a systematic, proactive and comprehensive manner. The procedures ensure safe operation of the plant as well as the integrity of the staff and all persons working in the plant.

Rescue and emergency operations

TVO maintains and develops operational readiness for emergencies. Planned rescue and readiness drills are organised regularly. The company continuously maintains awareness of any risks threatening the Company, the personnel and the operating environment.

Data security

Data security procedures are adapted to the criticality of the functions to TVO and to the associated risks. The objective is to secure nuclear safety, financial interests and personal privacy protection and to ensure availability of reliable information and to prevent damages caused by processing of data.

TVO's data security procedures cover the availability, authenticity and confidentiality of information and data systems, as well as the management of access rights.

Personnel is given appropriate access rights to information and data systems in TVO as required for the performance of their work tasks.

No information may be disclosed to third parties unless this is in the best interests of TVO. Information received from outside sources shall be treated pursuant to at least the data security procedures used or defined by the outside source in question.
